

New ECG Analysis Badge

I wish I had a dime for every ECG measurement I took back in paramedic school. My calipers were always with me ... as well as the numerous holes in my fingers from its sharp tips. It's time to set those outdated measuring tools aside and stop guessing in our ECG analysis. The new **R-CAT EKG Badge** is another great analysis tool from **EKG Concepts**. The R-CAT EKG Badge can fit in your pocket or be worn on a lanyard or ID badge clip. It features a window that allows for baseline analysis, showing elevation or depression in ST segments without hiding the ECG tracing. A color-coded section at the top of the badge helps to locate cardiac muscle involvement. Set measurements allow you to quickly calculate rate and red boxes across the bottom give you accurate PR, QT and QRS measurements.
